

IPL 2025 Performance Analytics Dashboard - Project Report

Project Overview

This project analyzes IPL 2025 data using Python, SQL, MySQL, and Power BI. The objective was to perform end-to-end sports analytics, generate insights, and build an interactive dashboard.

Tools & Technologies

Python (Pandas, NumPy, Matplotlib, Seaborn), SQL, MySQL, Power BI, Excel.

Data Preparation

Imported IPL datasets, verified data quality, handled missing values where required, and prepared data for analysis and visualization.

Python EDA

Performed exploratory data analysis to identify top teams, batsmen, bowlers, venue trends, run patterns, wicket patterns, and tournament statistics.

SQL Analysis

Executed analytical SQL queries including team wins, toss impact, top run scorers, top wicket takers, boundary analysis, venue analysis, player-of-the-match analysis, and team performance metrics.

MySQL Integration

Loaded cleaned datasets into MySQL and validated tables for analytical querying.

Power BI Dashboard

Built a 4-page interactive dashboard consisting of Overview Dashboard, Batting Analysis, Bowling Analysis, and Match & Venue Analysis.

Key Insights

Identified tournament winner, leading run scorers, leading wicket takers, venue performance trends, player-of-the-match leaders, economy rate comparisons, and batting performance indicators.

Business Value

Demonstrates end-to-end analytics workflow from data collection and preparation to database management, analysis, visualization, and business storytelling.

Conclusion

The project showcases practical skills in Python, SQL, MySQL, Power BI, data analysis, dashboarding, and insight generation suitable for entry-level Data Analyst roles.
